Course description

This course is intended to introduce students to the legal aspects of oil and natural gas production and highlight the issues a practicing legal advisor is regularly asked to discuss with oil and gas companies. The course will cover some industry background (e.g., significance of oil and gas in today's economy, basics of geology, a non-technical discussion of oil and gas production technologies) and, by building on this background, address various topics regarding the regulation and practical legal aspects of how the upstream oil and gas industry works.

Course outline

In addition to hearing presentations from the instructor on various topics, students will be required to participate in discussions and submit a short essay on a topic relevant to the course. The planned agenda for class meeting is the following:

1. Introduction, History of the Oil & Gas Industry
Daniel Yergin: The Prize (Free Press – Simon & Schuster, 2008)
